Regarding Report of two positive cases of COVID-19 in a Dunkirk Elementary School:

On the September 15, 2020 New York Department of Health COVID-19 Report Card it was erroneously reported that two students from Dunkirk Elementary School #7 had tested positive for COVID-19. The report was inaccurate due to human error in creating the report card submission on 9/15/2020. To clarify - the human error regarding the state report card caused the cases to be reported as on-site learning instead of off-site. The children have begun their remote learning but have not been present at School #7. The District is working closely with the health department and will continue to be timely, truthful, and transparent in all communications with you.

Michael Mansfield
Superintendent of Schools
Dunkirk City School District
